- 2 A section can have missing, invalid or unresolved data (any of IRI, Cracking %, Rutting or Faulting) due to roadway under construction, data not collected, etc.

SYSTEM PERFORMANCE DATA

An Update: 2017 Results

The MAP-21 PM3 measure (Level of Travel Time Reliability for the Interstate and non-Interstate NHS and Truck Travel Time Reliability Index) results for 2017 are now available for each MPO. Please see the charts on the following pages.

The Interstate Reliability measure remained relatively stable for most of Florida's MPOs, with the notable exception of certain large MPOs, including Miami-Dade TPO, MetroPlan Orlando, and North Florida TPO. However, Non-Interstate Reliability continues to show erratic results, with most MPOs experiencing dramatic upward swings in reliability from 2016 to 2017. The Truck Travel Time Reliability Index (an Interstate only measure) also remained relatively stable. Miami-Dade TPO is a notable outlier, showing a drastic improvement in the index.

These erratic trends can largely be attributed to the data sources. The measures for 2014 to 2016 were calculated using the National Performance Management Research Data Set Version 1 (NPMRDS v1), provided to the states by FHWA. A new vendor was chosen by FHWA to provide travel time data beginning in February 2017, commonly referred to as NPMRDS v2.

While both versions of NPMRDS use GPS probes to obtain travel times, a number of differences exist between the two.

NPMRDS v2 farms from a different set of GPS probes and uses a different Traffic Message Channel segmentation. A small number of segments that are not a part of the NHS are included though this amount is 26% less than v1. NPMRDS v2 also uses different data processing and aggregation methods. Most notably, NPMRDS v2 uses path processing to derive more accurate travel times between two points while v1 uses the older spot speed approach.

PM3 Results 2014-2017
